

BUILD PROCESS OVERVIEW

Every build progresses slightly differently depending on size, specification, and site conditions. This guide provides a simple overview of what to expect, from initial decisions to a completed cabin.

The timeline below reflects a typical self-build or small team installation.

1. Planning and Early Decisions

Before ordering, most people spend time choosing:

- Cabin size and model
- Insulation level
- Exterior finish
- Intended internal layout

This stage helps set the direction for the build and creates a clear foundation for next steps.

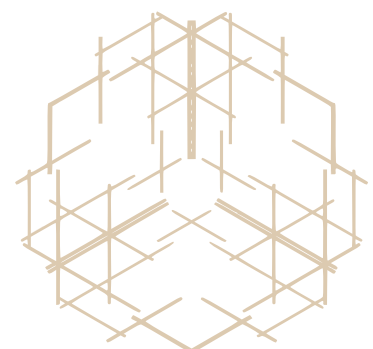

2. Order Confirmation and Preparation

Once your order is placed, there is time to prepare the site and clarify any details.

During this stage you may:

- Review drawings and documentation
- Confirm access route and build area
- Prepare or schedule foundation work
- Plan utilities if needed

Good preparation helps the build move forward smoothly.

BUILD PROCESS OVERVIEW

3. Delivery

Your cabin arrives as modular, clearly labelled components.

- Panels are manageable and designed for narrow or restricted access.
- Materials can be staged near the build area for efficiency.

Once delivered, the build can begin when the weather and schedule allow.

4. Foundation Installation

The foundation system is installed to support the structure.

- Accurate measurements ensure alignment.
- The system is designed to work on a variety of ground conditions.
- This stage forms the base for the structure to sit level and secure.

5. Cabin Assembly

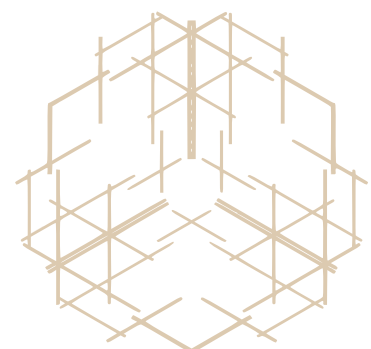

With foundations in place, assembly begins.

- Structural panels are fixed in sequence.
- The building takes shape gradually and predictably.
- Two people can complete most stages comfortably.

Once the external structure is up, the space becomes enclosed and weather-protected.

6. Exterior Completion

Exterior finishing details are added.

BUILD PROCESS OVERVIEW

This may include:

- Cladding
- Windows and doors
- Sealing and weathering details
- Any external features such as decking, steps, or pathway surfacing

Once complete, the exterior is protected and ready for long-term use.

7. Interior Finishing (Optional)

If you're fitting out the inside, this stage may include:

- Electrics and lighting
- Plumbing (if required)
- Linings and finishes
- Flooring
- Storage and furniture installation

This stage can be completed quickly or gradually depending on preference and specification.

A Calm, Structured Progression

Whether you build it yourself or work with a contractor, the process is designed to feel manageable, ordered, and achievable.
